

Revolut AI Challenge

Revolut AI Challenge

From transaction data to financial Intelligence

At **Revolut**, we don't just want to show users where their money went; we want to help them make smarter financial decisions for their future. Transaction categorization remains a major industry challenge:

- Supermarket purchases may be tagged as Shopping instead of Groceries
- Inaccurate categorization leads to poor budgeting insights
- Users struggle to understand their spending habits

**Notes*

Core Challenge

Design a framework for an AI system that improves Revolut's spending analytics. Your goal is to outline the logic behind the solution, but we also encourage teams to build a proof of concept that demonstrates how key elements of their approach could work in practice.

Your framework must explain the following three components:

Categorization Logic

How would your system automatically assign an accurate category to a transaction? (e.g., based on merchant name, time, amount, user history).

Insight Engine

Once transactions are categorized, what is one specific, valuable insight your system would provide to a user? (e.g., alert them when they are overspending in a category, identify a new recurring subscription).

User Interaction

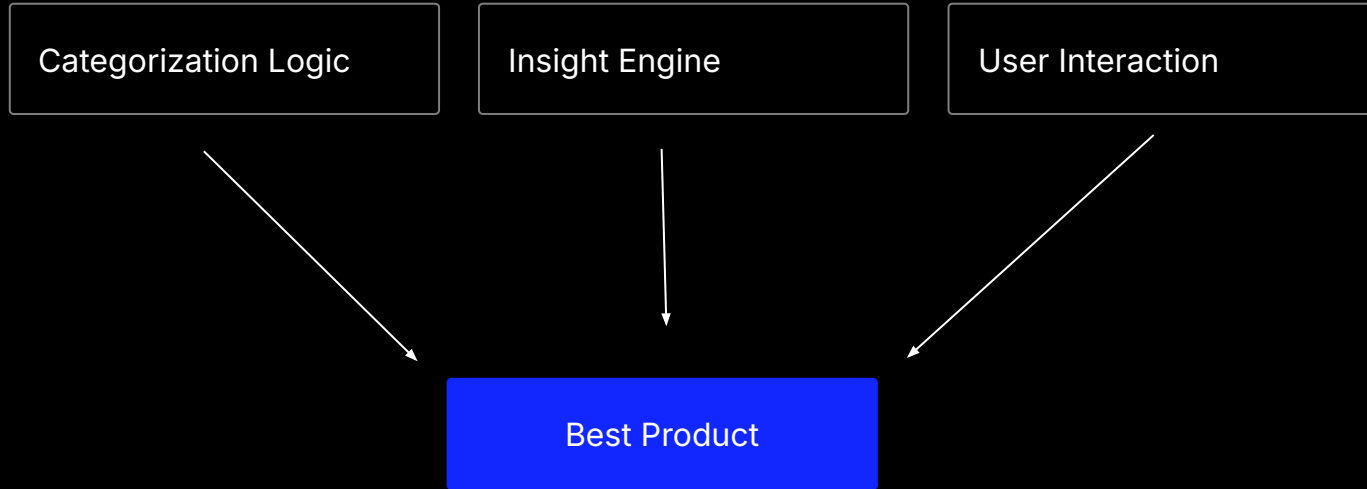

How would the user receive this insight? (e.g., a push notification, a summary in the app).

Resources Provided

You will be working with a sanitized and anonymized synthetic dataset that mirrors real-world transaction data

Data Description	Value
Total Transactions	~1,000,000
User Scope	Synthetically generated data similar to European users
Time Period	Q3-Q4 2024
Columns	Includes anonymized transaction_id, owner_id, amount, merchant data, category, date, and user demographic data.

Core Challenge

Final Deliverables

1-Page Executive Summary (PDF)

A concise document outlining your proposed framework, covering both the categorizer and the AI advisor.

10-Minute Presentation

A slide deck (e.g., Google Slides, PowerPoint) to present your solution to the judges, followed by a 5-minute Q&A

Judging Criteria

Technical Depth & Creativity (40%)

The ingenuity and feasibility of your proposed AI/ML logic for both categorization and financial advice

Business Impact & Feasibility (30%)

How your solution adds value to Revolut and its users, and how practical it would be to implement

User Experience (UX) Design (20%)

The quality of your thinking about the user's interaction with the AI advisor.

Presentation Quality (10%)

The clarity and persuasiveness of your presentation.

Our 2 Core Programmes

For Interns and Graduates

Talent
Programmes

Revolut

Internship Programme

- Global summer intake (June/July for 10 weeks)
- Penultimate year students from leading global universities
- Top performers receive return offers for the Graduate Programme

Graduate Programme

- Autumn and Spring start dates
- 12-month programme for recent graduates of leading global universities
- Top performers progress quickly into a Junior role

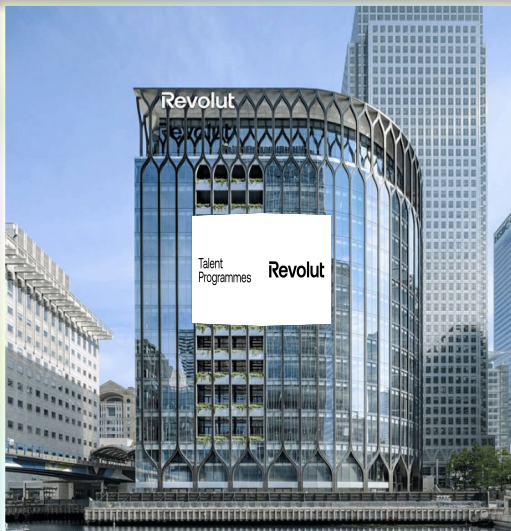

Where We Hire

Global Hiring and Relocation

Hybrid working
across multiple locations.

Relocation

we can relocate exceptional talent globally, supporting visas, flights and accommodation.

 Dubai, UAE

 Barcelona & Madrid, ES

 Lisbon & Porto, Portugal

 Kraków, Poland
